ÓRBITA

The employee intranet for HCL DX Compose

Time tracking, time off, expenses and approvals, with an AI assistant that acts for every employee. Free, open source and ready in minutes.

Open source · MIT licence

WHAT IS ÓRBITA

Everything employees do every day, inside your HCL DX portal

🏠

Six applications

Home, time tracking, time off, expenses and travel, approvals and kiosk. Native DX Script Applications, built in React.

🗄️

One microservice

A REST API on Open Liberty with PostgreSQL, next to DX. No users or passwords of its own: identity is the DX session.

⚡

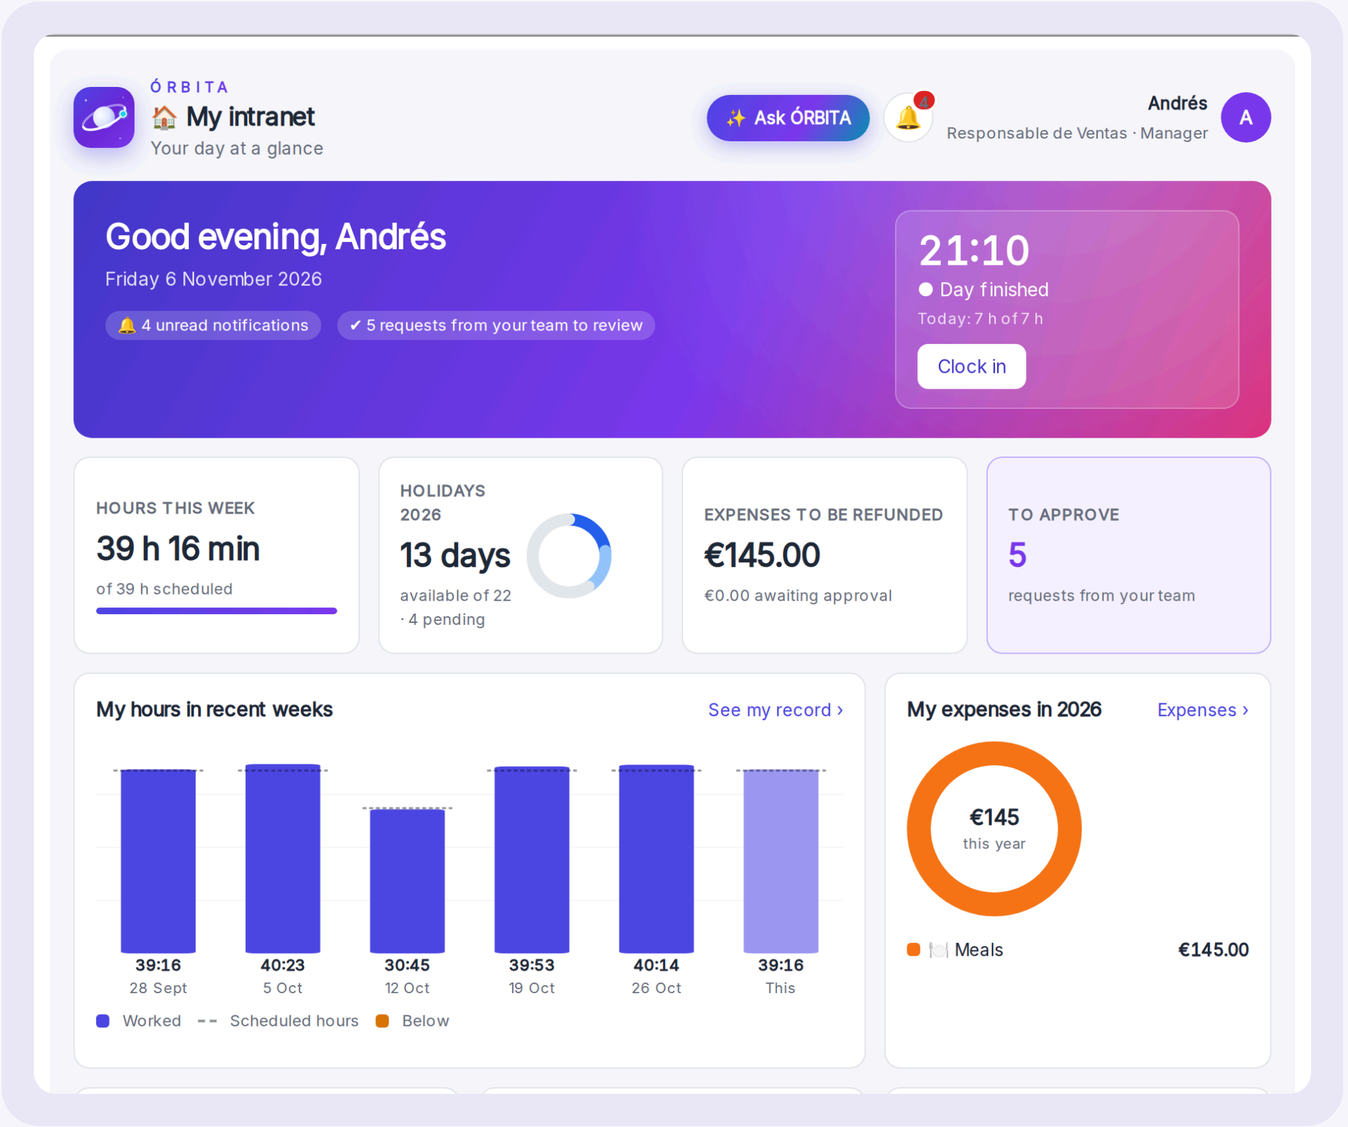

AI that acts

An assistant that answers and gets things done for every employee, with their permissions, in English or Spanish.

MY INTRANET

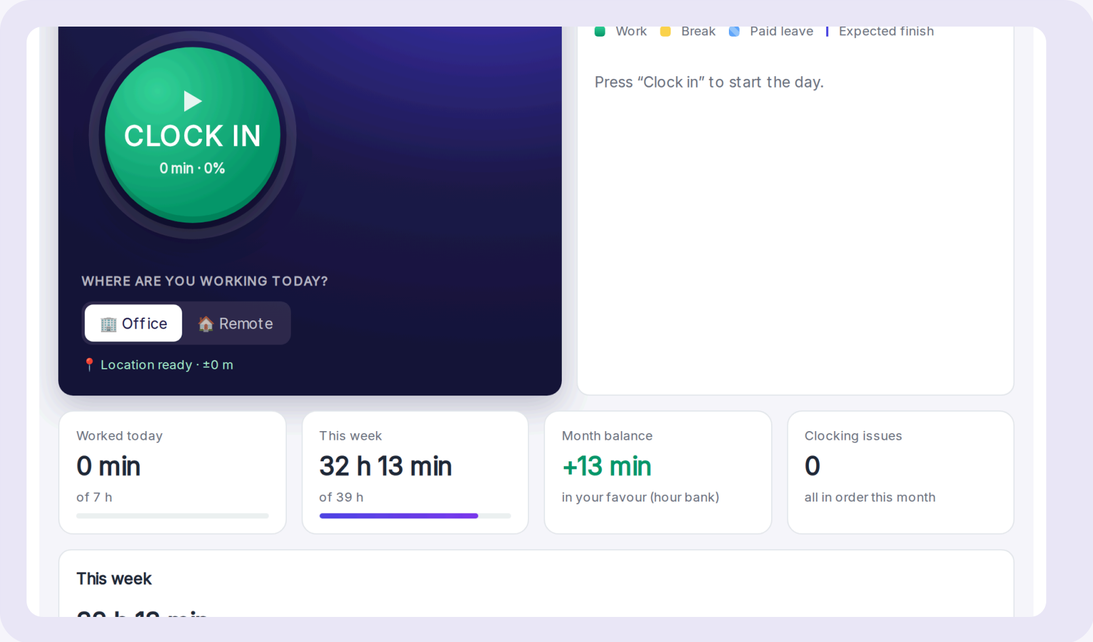

Each person's day at a glance

Hours this week, holiday balance, expenses to be refunded, what is waiting for approval and who is off. And clocking in without leaving the page.

TIME TRACKING AND WORKING TIME RECORD

Clock in from the browser or at the kiosk by the door

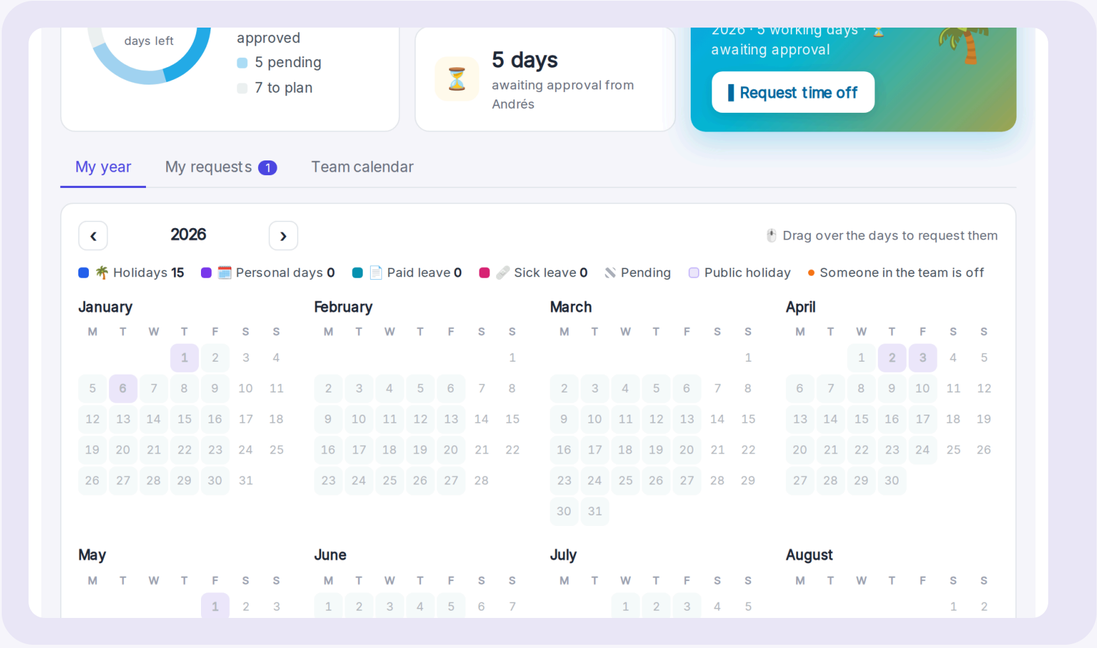

Breaks and paid leave, location, a monthly record and corrections approved by the manager.

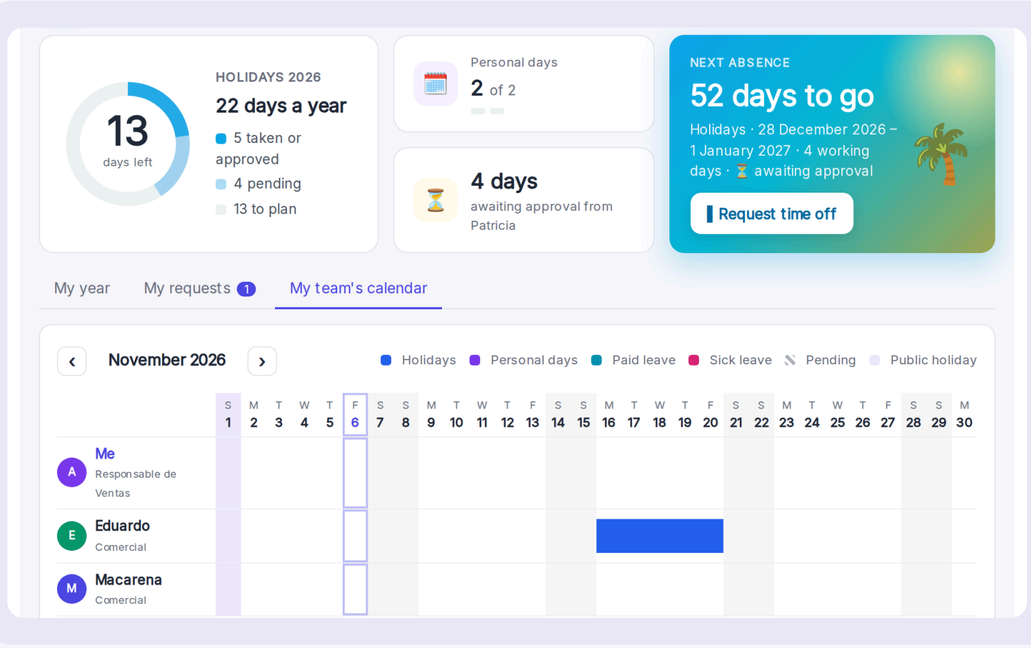

A kiosk on a tablet: PIN or QR card, no sign-in. CSV export of the legal working time record.

TIME OFF

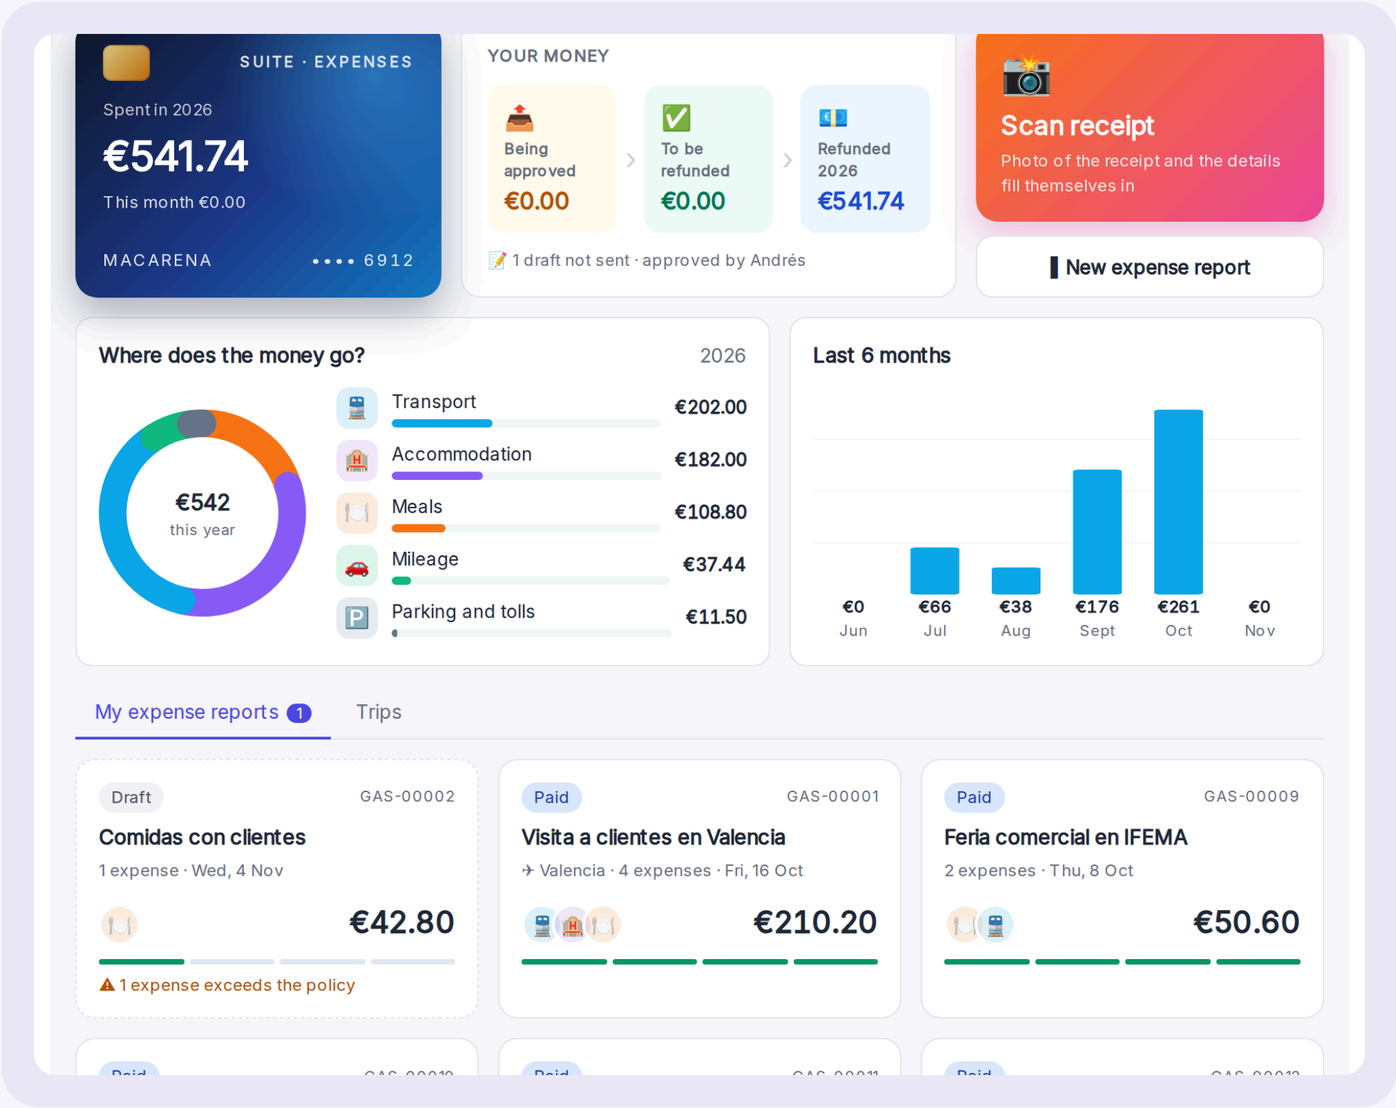

Request days by dragging over the calendar

Balance in a ring, a countdown to the next absence and the whole year with public holidays.

Team calendar: who is off and which requests overlap, before approving.

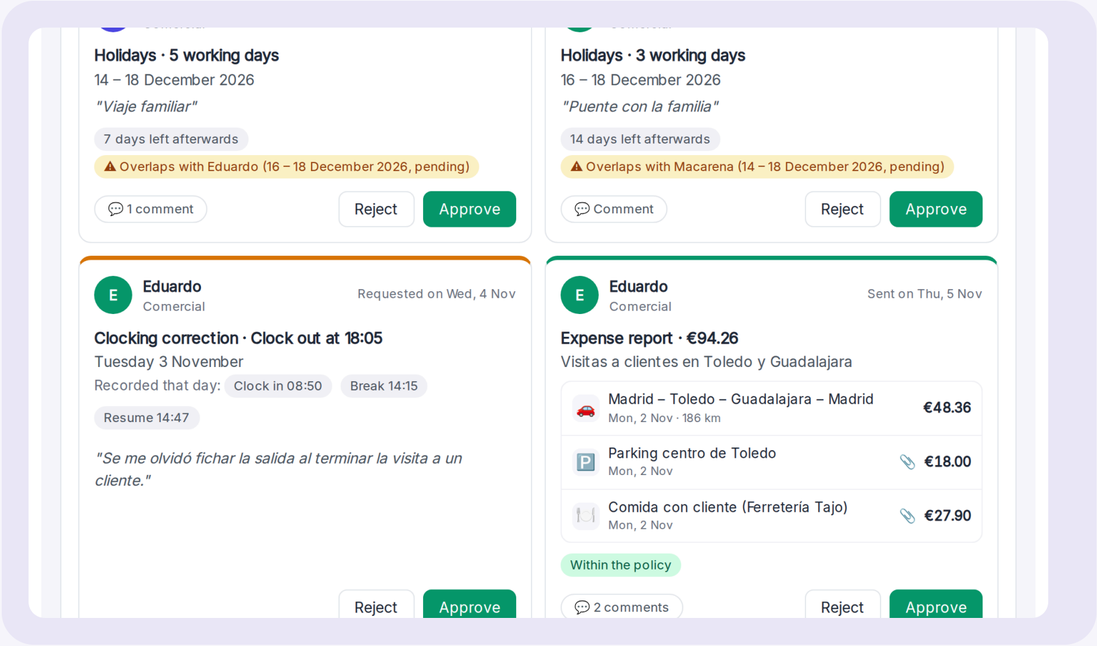

EXPENSES AND TRAVEL

Snap the receipt and the report fills itself in

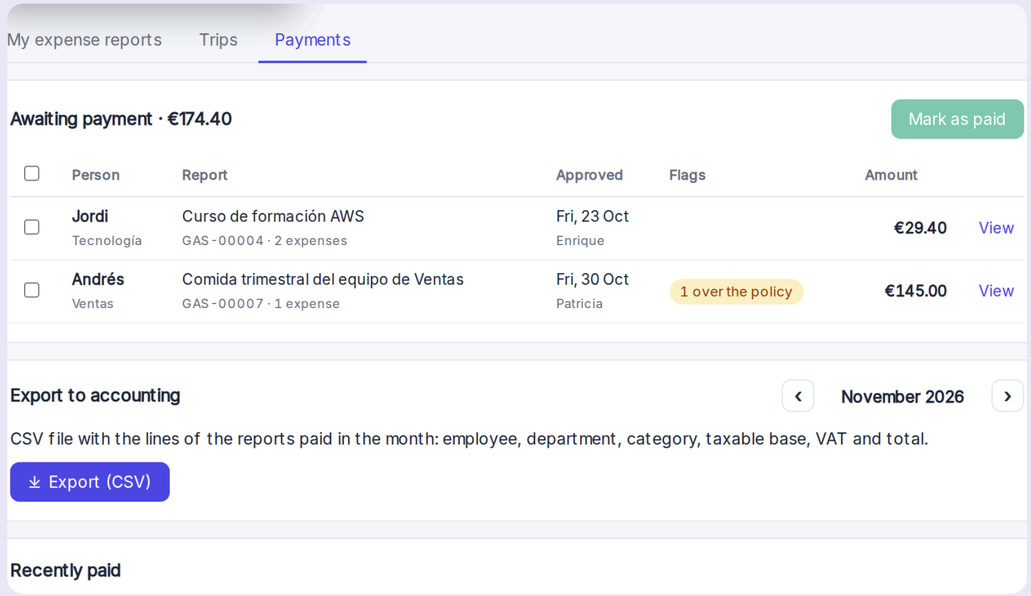

Automatic receipt reading, mileage, expense policy limits with justification, travel requests with a budget, and the status of every euro: being approved, to be refunded, refunded.

APPROVALS AND PAYMENTS

Every request, with the context to decide

The manager's inbox: remaining balance, team overlaps, expenses over the policy and a conversation on every request.

Accounting pays the approved reports and exports them: taxable base, VAT and total per line.

AI ASSISTANT

Just ask, and ÓRBITA does it for you

“How many days do I have left?” · “Clock me in, working from home” · “Add a €42.80 lunch to my Seville report” · “Approve Macarena’s holidays”

Acts as the user

With their permissions, and always asks for confirmation before changing data.

Your model, your cost

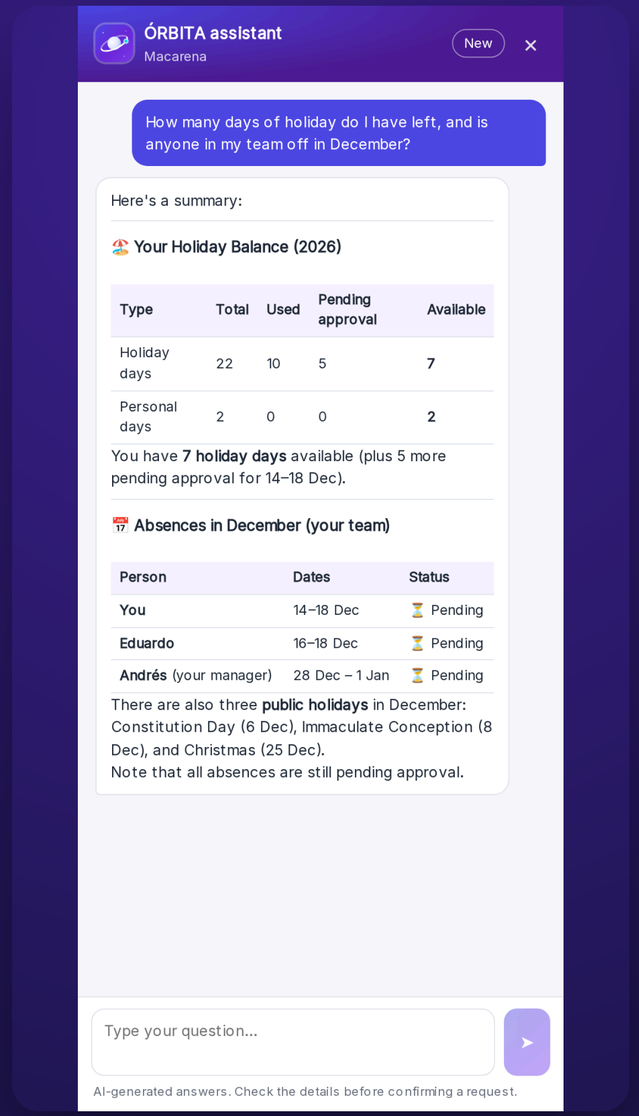

Any model through LiteLLM, with a small prompt that saves tokens.

26 tools

Time tracking, time off, expenses, approvals and notifications. You choose which ones to publish.

Also in HCL DX IQ

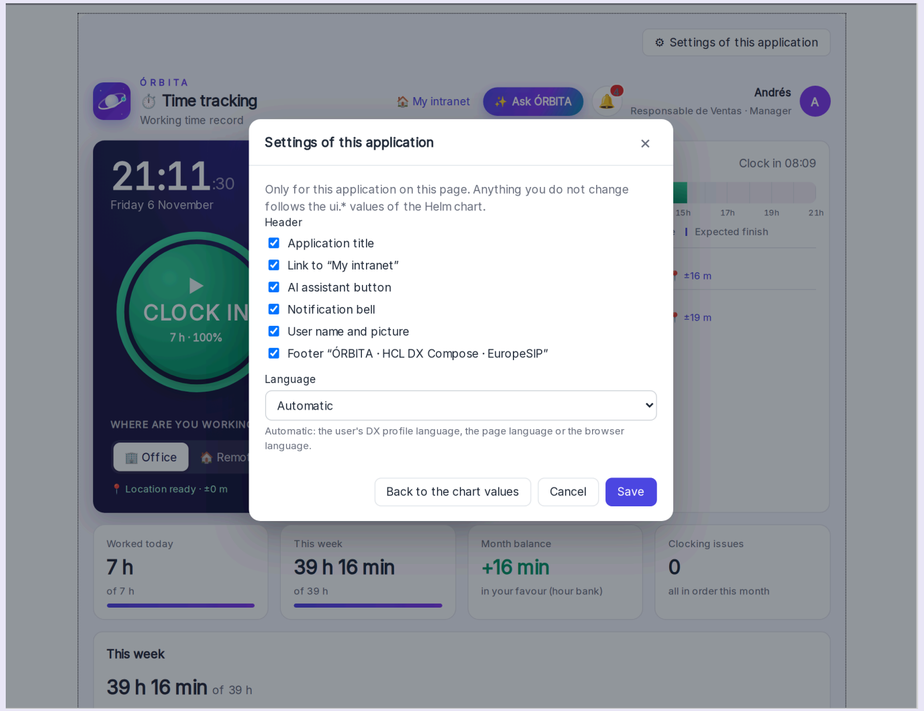

A standard MCP server: ÓRBITA inside the IQ chat or your own assistant.

BUILT FOR HCL DX COMPOSE

It lives inside your portal, not next to it

Sign-in	The DX session: no users or passwords of its own
Languages	English and Spanish, from each user's DX profile
Edit mode	The portal's own edit mode for page and portlet properties: header, footer and language
Your theme	Hide what the theme already shows (ui.* values)
Data	PostgreSQL: your portal's database server or your own; Flyway upgrades keep the data
DAM	Optionally, logos and images of the application from DAM

THEME AND DAM INTEGRATION

Part of your portal, down to the header

An example theme, deployed by the chart

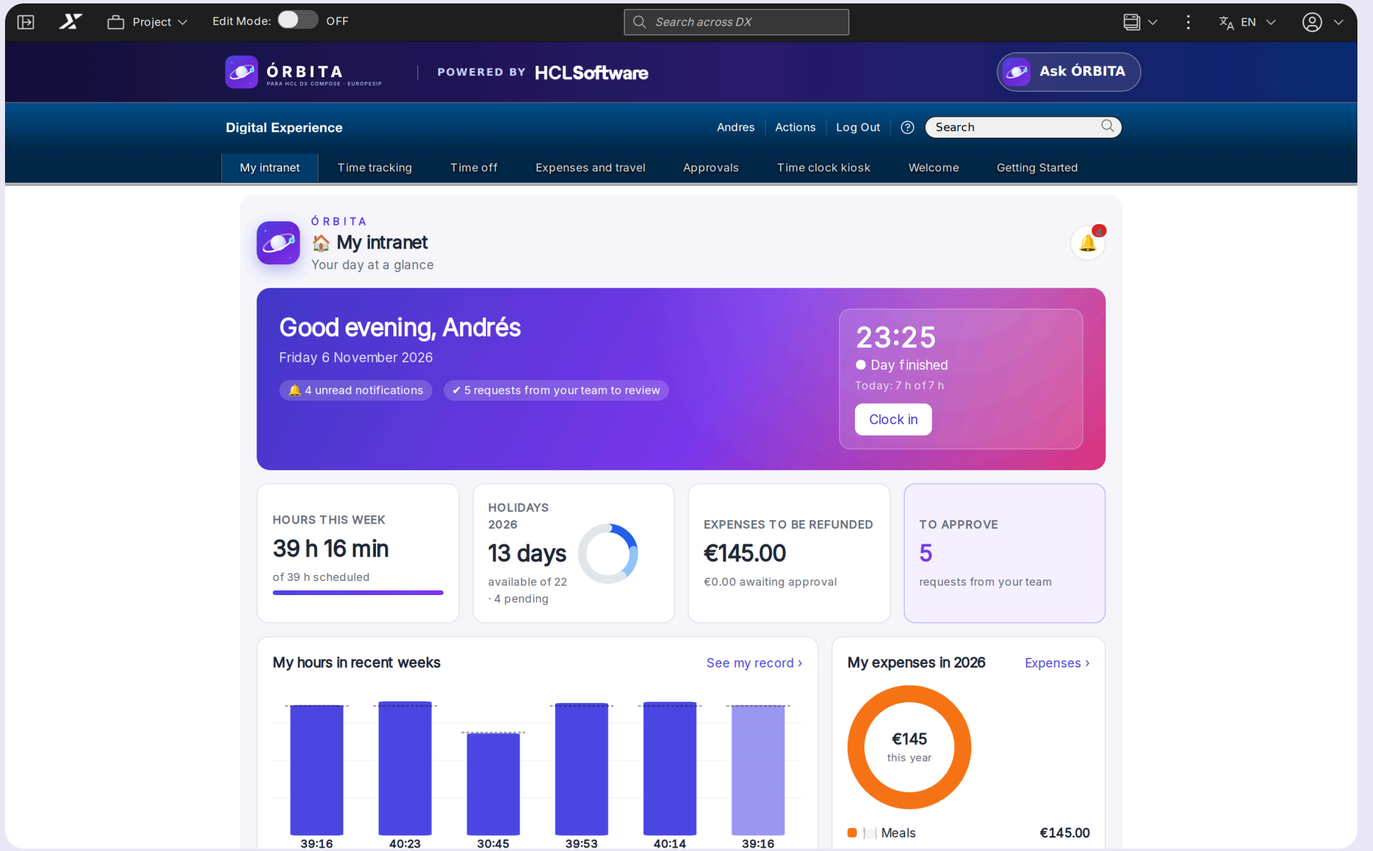

A copy of the HCL DX Portal 8.5 theme with an ÓRBITA header, on the ÓRBITA pages only.

Fully integrated with DAM

Images and logos are served from a DAM collection: update them in the DAM, no code.

“Ask ÓRBITA” in the portal header

The assistant opens from the theme. Or keep your corporate theme instead.

INSTALLATION

One Helm command and ÓRBITA is in your DX

```
helm upgrade --install orbita oci://ghcr.io/europesip/charts/hcl-dx-orbita \
--version 3.0.0 -n dx-shared -f orbita-values.yaml
```

Database

Creates its user and database in PostgreSQL, and the tables at start-up.

API and assistant

Deploys the microservice on the DX host name, with its MCP server.

Apps and pages

Pushes the six Script Applications with DXClient and creates their pages.

Public chart and images, no registry login · Step-by-step guide in Lab 5 of the HCL DX Compose Labs

OPEN SOURCE · MIT LICENCE

All this, at no cost

Download it, install it and run it in production with no licence fees. The complete source code, the Helm chart, the manuals and the procedures are all included.

Use it and change it

Also for commercial purposes, in your organisation or for your customers.

MIT licence

Use, copy, modify and distribute it freely. Just keep the copyright notice.

No hidden strings

Public images and chart; your own database and your own AI model.

github.com/europesip/orbita **MIT licence**

OPTIONAL · EUROPESIP SERVICES

And if you want to go further, we are with you

ÓRBITA works as it is, with no strings attached. The team that built it can tailor it to your organisation.

Your brand

Branding and DX theme customisation

Integrations

Payroll, ERP, directory and your in-house tools

AI in Teams

The ÓRBITA assistant inside Microsoft Teams

Sovereign AI

Your own model, in your cloud or on your servers

New features

Tailored evolution: reports, metrics, processes

Languages

Localisation to other languages and regulations

Maintenance

Upgrades of ÓRBITA and HCL DX Compose

Support

Installation, go-live and professional support

Available on demand. Subject to a services agreement.

Start with ÓRBITA today

Download it, install it with one command and try it with your team. When you want more, we are here.
